Full Stack .Net React Developer

I am a Full Stack Developer specializing in .NET and React, with extensive experience in developing integrated web applications. Passionate about delivering innovative and efficient software solutions, I have a proven track record of building seamless and inspiring user experiences. I excel in working effectively within cross-functional teams to deliver high-quality projects on time.

CORE PROFICIENCIES

- | | | |
|---------------------------|------------------------------|--------------|
| - C# | - OOP | - React |
| - ADO. Net | - Algorithms | - Bootstrap |
| - API / Restful API | - DataStructure | - Html / Css |
| - SQL Server DataBase | - SOLID Principles | - JavaScript |
| - .Net Framework / Core | - Problem Solving | - Typescript |
| - Linq / Entity Framework | - Git / GitHub /Command Line | |

PROJECTS

• E-Commerce & Store Department (Full Stack Asp .Net / React)

After signing up and logging in, customers can search for products, filter by category or price range, and use pagination. The application provides detailed product information, related products, stock availability, reviews, and comments. Customers can add, edit, and delete reviews. The shopping cart allows adding, removing, and updating product quantities, with all changes saved to the database. Customers can place orders and track their status.

React : https://github.com/Ahmedmeid99/E-Commerce_React

(Asp .NET RESTful API | SQL Server | React | Redux | React-Router | Hooks | 4 Tier Architecture | Asynchronous Programming | Multithreading)

- **Driving & Vehicle License Department (.Net Desktop App)**
This system handles license applications by vehicle type and license category. After passing the required tests, licenses are issued. Services include issuing local and international licenses, renewing, replacing lost/damaged licenses, and unblocking licenses, each with specific fees and requirements. The system has three user roles: applicant, driver, and user, with permissions to add, view, and modify data.
